

## INGREDIENTS

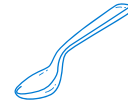

1 part powdered clay

3 parts potting soil

$\frac{3}{4}$  part water

A sprinkle of seeds

## UTENSILS

# STEP 1

In a bowl, mix the powdered clay and potting soil thoroughly.

# STEP 2

Slowly stir in the water until the mix holds together. Avoid over-watering—it should be damp, not sticky.

# STEP 3

Roll mixture into small ping-pong size balls. Press a dent in each ball and add around your seeds, then gently reshape the ball to cover them.

# STEP 4

Set the seed balls aside to dry completely. Once hardened, they will stay protected until rainfall triggers germination.
